

mohdoh

Instructions for Use

IMPORTANT. MohDoh is a water-based modelling dough and it will quickly dry out if left exposed to the air.

- Always store MohDoh in a cool, dark place.
- MohDoh has an expected life of approximately 30 ten minute uses.
- MohDoh will dry more quickly if used continuously for longer than ten minutes at a time.
- MohDoh must be returned to its original pot immediately after use, the lid closed firmly and completely, and the pot returned to a cool, dark place.
- MohDoh must be kept in its original pot at all times when not in use. (If the pot is lost or damaged any suitably sized air-tight container can be used.)
- Partially dried dough can be refreshed by a few seconds **ONLY** in a microwave.
- A **VERY LIGHT** misting with a fine water spray followed by kneading the dough can also be used to refresh partially dried dough, but the surface must not be wetted as the dough structure will break down.
- **NEVER** add new oils to the dough as the oils used in MohDoh have been carefully selected and measured for their intended purpose.

Warning: MohDoh is not a medicine. MohDoh **MUST NOT** be used as a replacement or alternative to medical advice and treatment.
